

LC-MPBI

Industry Scan Checklist & Interview Guide

Phase 1 and Phase 2 working tools for Country Leads
Companion to the Method Guide · Version 0.9

Use this pack after reading the Method Guide. Part A helps you build the national list of Lean organisations. Part B supports semi-structured interviews that refine local survey wording before Phase 3.

Part A — Industry Scan Checklist (Phase 1)

Goal: assemble a transparent list of organisations in your country that show evidence of Lean Construction application or promotion. This list is the invitation frame for the nationwide survey.

A1. What to record for each organisation

Field	Notes
Organisation name	Legal or trading name
Role in value chain	Owner / designer / contractor / specialist / supplier / consultant / training / software / other
Evidence of Lean	Website text, job ad, membership, project case, LinkedIn, conference, etc.
Evidence source + date	URL or document; when you found it
Contact (if available)	Email or form — only if publicly available or obtained legitimately
Lean company? (Y/N)	Y = clear sign of application in projects; N = only training, software, or advocacy
Notes	Anything useful for later contact or coding

A2. Search sources (tick as you go)

- National Lean Construction Institute / LCI membership list and congress attendee lists
- National construction associations that may list Lean programmes or working groups
- Structured web search of company sites (Lean Construction + local-language terms)
- Job portals and company career pages (Lean, Last Planner, LPS, Takt, pull planning...)
- LinkedIn: firm pages and practitioner profiles (public information only)
- Conference and workshop programmes (national and regional)
- University / research group pages and published case studies
- Training providers and software vendors active in your market
- Prior academic lists, theses, or government pilot programme registers

A3. Search tips

- Use both English Lean terms and local-language equivalents (e.g. Lean Construction, Last Planner, LPS, Takt, pull planning, plus translations).
- Prefer primary evidence (own website, own job ad) over third-party mentions.
- Keep a simple spreadsheet; one row per organisation. Deduplicate by name.
- Separate “Lean companies” (application in projects) from pure training/software if useful for analysis.
- Stop when new sources add almost no new organisations. Perfect coverage is not required.

Germany 2025 used four complementary strategies and identified 451 Lean companies. Your scale will differ; what matters is a documented, multi-source list you can defend.

A4. Phase 1 output checklist

- Spreadsheet with the fields above
- Count of organisations with Lean application evidence (headline figure)
- Short note on sources used and any major gaps (1 paragraph)
- Secure storage of the list (for invitation in Phase 3)

Part B — Interview Guide (Phase 2)

Goal: understand how Lean is applied in practice in your country, how maturity is perceived, and which local terms or barriers matter — so the Phase 3 questionnaire is clear and relevant. Recommended: 8–15 interviews, 45–60 minutes each.

B1. Who to interview

- Practitioners with real project experience (not only trainers or software sellers).
- Mix of roles: contractors, designers, owners, consultants — as available.
- Mix of maturity if possible (early adopters and more advanced).
- Recruit from your Phase 1 list or via the national LCI network.

B2. Before the interview

- Send a short invitation explaining LC-MPBI and that findings inform a national picture (no individual attribution without consent).
- Agree length (45–60 min) and medium (in person / video).
- Confirm consent to note-taking or recording; offer anonymity in any published summary.
- Review their organisation's public Lean footprint (from Phase 1) so you ask informed questions.

B3. Opening (5 minutes)

1. Thank them; state purpose: understanding Lean practice in [country], not auditing their firm.
2. Confirm consent and whether they prefer named or anonymous quotes in any internal notes.
3. Ask for a one-minute overview of their role and how long they have worked with Lean Construction.

B4. Theme guide (use as a flexible agenda, not a rigid script)

Theme 1 — Practices and project phases

- Which Lean practices does your organisation use most often? (e.g. Last Planner, Takt, 5S, visual management, TVD...)
- In which project phases is Lean applied (planning, execution, both)? Has that changed over time?
- On roughly what share of projects is Lean used — a few pilots, many, or most?

Theme 2 — Organisation and maturity

- How is Lean organised internally (dedicated team, project-by-project, embedded in standard process)?
- How would you place your organisation on a 1–5 maturity path from “informed only” to “Lean in culture and strategy”?
- What would need to change to move one stage higher?

Theme 3 — Outcomes and barriers

- What benefits have you seen when Lean is applied well?
- What are the main barriers to wider or deeper application in your organisation / market?
- Have you seen “Lean light” or Lean used only as a label? How does that affect the next project?

Theme 4 — National picture

- How visible is Lean Construction in [country] compared with five years ago?
- Which actors (owners, contractors, institutes, government) push adoption most?
- What wording or examples should a national survey use so practitioners understand the questions?

B5. Closing (5 minutes)

- Is there anything important we did not cover?
- May we contact you again if a survey item needs a practitioner check?
- Thank them; explain next steps (survey, national picture, optional publication).

B6. After the interview

- Write a short structured note the same day (practices, phases, maturity view, barriers, survey wording tips).
- Tag insights that should change Phase 3 wording (local terms, examples, answer scales).
- Do not redefine core metrics — only improve clarity and local relevance.
- After 8–15 interviews, synthesise 1–2 pages: common practices, barriers, and recommended survey adaptations.

B7. Ethics reminder

- Participation is voluntary; interviewees may skip any question or stop at any time.
- Company-level detail stays confidential unless explicit permission is given.
- Public LC-MPBI outputs use aggregated survey figures, not interview transcripts.
